

JUST Undergraduate Final Admission System

A Project Report Submitted

In partial fulfillment of the requirements for the degree of
B.Sc. Engineering in Computer Science and Engineering

Submitted by

Nafis Ahamed

Student ID: 200129

Session: 2020–21

Supervised by

Dr. Mohammad Nowzin Amin Sheikh

Professor

Department of Computer Science and Engineering

Faculty of Engineering and Technology

Jashore University of Science and Technology

Jashore-7408, Bangladesh

April 2026

ACKNOWLEDGEMENT

First of all, I would like to express my deepest gratitude to the Almighty and Most Merciful God, by whose grace and blessings I have been able to complete this work successfully.

I would like to express my sincere appreciation and profound respect to my project supervisor, **Dr. Mohammad Nowsin Amin Sheikh**, Professor, Department of Computer Science and Engineering, Jashore University of Science and Technology (JUST), for his constant guidance, invaluable suggestions, and immense support throughout the duration of this project.

I am also truly grateful to the Dean, Faculty of Engineering and Technology, and the Chairman of our department, **Md. Kamrul Islam**, for their invaluable advice and constant encouragement in every aspect from the beginning to the end of this research work.

Finally, I owe my deepest thanks and gratitude to the pillars of my success—my beloved parents—for their endless blessings, sacrifices, and financial support, which have always motivated me to move forward.

Preface

On the eve of the beginning of civilization, human beings had been striving tirelessly to discover, explore, and innovate unknown aspects of the world. This inherent curiosity and desire for advancement have driven humanity toward continuous progress and development. Over time, human beings have not only acquired theoretical knowledge but have also emphasized the importance of practical implementation, which plays a crucial role in solving real-world problems and improving the quality of life.

In the modern era, the field of Computer Science and Engineering has emerged as one of the most dynamic and influential disciplines, contributing significantly to technological advancement and digital transformation. The philosophy of the Computer Science and Engineering department is centered on equipping students with both theoretical understanding and practical skills. To achieve this goal, the department has introduced thesis and project programs that encourage students to engage in real-life problem-solving and innovative system development.

As a part of fulfilling the academic requirements of the undergraduate program, I have undertaken a project titled **“JUST Undergraduate Final Admission System”**. This project aims to develop a comprehensive web-based platform that simplifies and streamlines the admission process for undergraduate students. It focuses on efficiency, transparency, and user-friendliness, ensuring a better experience for both applicants and administrators.

Throughout the development of this project, I have conducted extensive research, analysis, and observation to understand the existing admission processes and identify their limitations. This has enabled me to design and implement a system that addresses real-world challenges effectively. The project has provided me with valuable opportunities to enhance my technical skills, problem-solving abilities, and understanding of software development methodologies.

I believe that this project will not only serve as an academic accomplishment but also contribute positively to the automation and digitalization of admission systems. The knowledge and experience gained during this work will undoubtedly play a vital role in my future career and professional development.
